TRANSCEIVER-PROCESSOR BUILDING BLOCK FOR ELECTRONIC RADIO SYSTEMS

ABSTRACT OF THE DISCLOSURE

transceiver-processor building block (700)for Α implementation of radio systems, an example being used in an electronic radio system multifunction slice, includes several (704-710), a processor connected the transceivers transceivers (702), and a local RF control bus (726) coupled between the processor (702) and the transceivers (704-710). A radio network bus (716) is also provided and connected to The local RF control bus (726) is the processor (702). inaccessible directly from outside the multifunction slice. In contrast, the radio network bus (716) is accessible directly from outside the multifunction slice to allow "stacking" of multiple slices. The building block (700) may also include an external control bus (728) connected to the processor (702). An external control bus connector (730) then provides direct accessibility to the external control bus (728) from outside the multifunction slice.
